

full use of the newly released capacity of existing railways. The future research will explore the planning of train operations, under the premise that the demand increment increases nonlinearly with the number of trains, and will also discuss the operation plan of another type of freight trains.

## ACKNOWLEDGMENTS

This work was supported by the National Natural Science Foundation of China (Grant Number 71401182), Philosophy and Social Foundation of Hunan (Grant Number 2018YBG021), Educational Commission of Hunan Province of China (Grant Number 18C1522).
