

the students can be specifically understood and objectively evaluated.

ACKNOWLEDGEMENTS

The authors would like to thank Beijing Municipal Education Commission Scientific Research Plan, Social Science Plan General Project for their financial support under the grant number of No. KM201710017004, and the Project of "Passing the Scientific Research" for the Young Teachers of Beijing Institute of Petrochemical Technology and the Project of the School-level Education Reform and Research of Beijing Institute of Petrochemical Technology in the 2015-2016 Academic Year (NO. ZD20160801).
